The full change log is at the end of this post.Heavens Gardens, by CoasterBDevlogWe added a Spinning Coaster:And we worked on audio. One of the main problems we had with audio for a long time was that the default way how Unity handles it doesn't work well with our game due to its near-orthographic perspective. Consider this scene:There's a red coaster on the ground and a blue coaster that's been raised. They are both roughly in the same position on the screen from this view. Now the way Unity figures out what's audible and what's not is that you place an "audio listener" somewhere in the scene. You can imagine that it works somewhat like a microphone - everything close to the listener is loud and the further away an audio source is from it the less audible it becomes. The yellow circle in this example shows everything that's within the audible range of the audio listener:Looks about right! But if we look at it from another perspective.....the two coasters are actually not close to each other at all and no matter where we place the audio listener, one of them will always be outside of its range. We could increase the range, but then we'd hear audio sources that are way off-screen.What we really needed was a way to control the volume of an audio source depending on its position on screen instead of its physical distance to the audio listener, and that has been added now.This also means that we need to rebalance our audio, so if things sound a bit too loud or too silent currently that's why :) Posted by Admin | November 29, 2018 | Building, Management, Simulation, Strategy, Parkitect Free Download PC Game Cracked in Direct Link and Torrent. Many anti-virus programs detect game files as a "virus" because the game files contained cracked files which make the game run. A lot of these anti-virus companies get paid to do this, that way you buy the game instead. To prevent this, disable your anti virus, then re-extract the .zip file and the game will run. Every game on this site was tested on our own computers, so you can be insured that it's not a real virus. Anything your A.V may tell you, is a false positive. 99% of the time, the errors come from missing programs. Check for a Redist or \_CommonRedist folder, and be sure to install all the required software in those folders: DirectX, vcredist, DotNet, etc. Another useful tip is to disable any form of anti virus programs AND windows defender if the game doesn't run. Usually, you don't need to do this, but some AV detect the game files as a "crack" and remove them
